Windows – Device Certificate Selection process after enrolment into Intune

This document explains how to select the appropriate device certificate when students connect to a school network after enrolment into Intune for the first time.

As students with the current Telstra device certificate installed on their device will be prompted to select a device certificate when they connect to your school network for the first time after enrolment into Intune, it is important that they select the appropriate device certificate to gain access to digital network resources under the BYOx V2 solution.

These instructions are for devices:

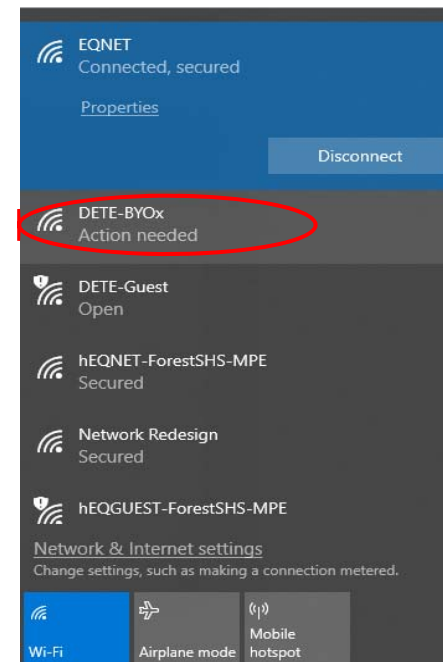

- owned by students (BYO) and
- using windows 10.1607+.

Certificate selection after enrolling your device into Intune

Step 1. Selecting the appropriate device certificate

Once you have successfully enrolled into Intune, two device certificates will be installed

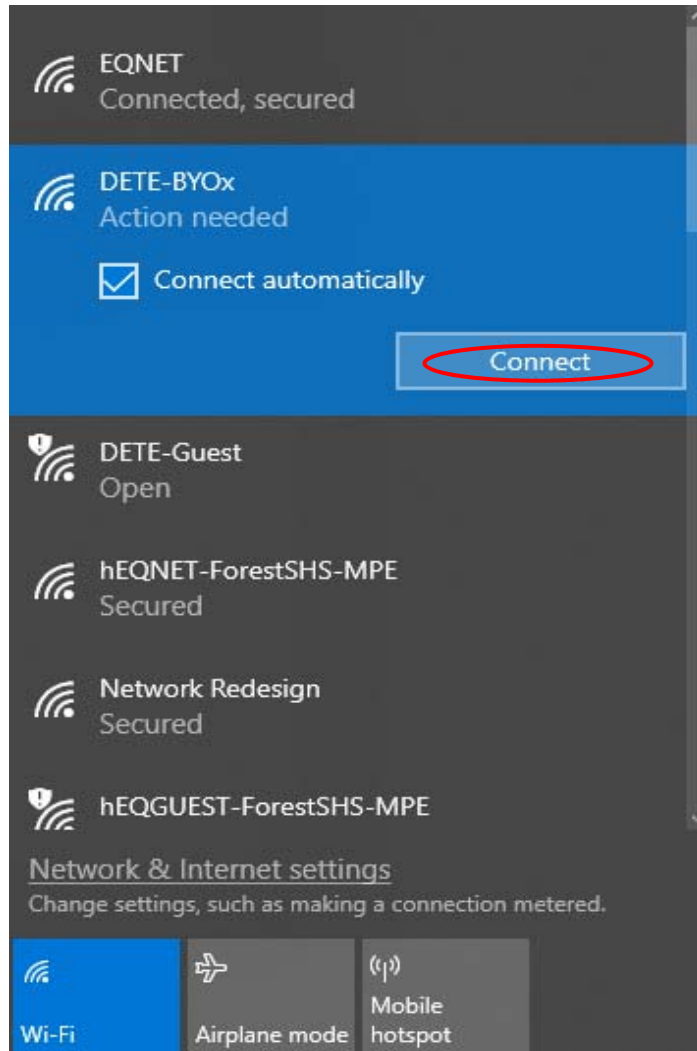

- a. From the Wi-Fi network menu display, identify and select the DETE-BYOx option,
